

Alert

PSE&G prepared for this week's hot weather

With temperatures expected to be in the 90s this week, PSE&G is monitoring weather conditions and has additional personnel on hand to handle any power interruptions as a result of the high temperatures. Our call centers also have extra personnel on duty to speak with customers, and additional appliance service technicians are scheduled to assist with central air conditioner repairs.

We prepare for summer all year long by replacing and reinforcing electric circuits and other equipment, using helicopters to inspect our high-voltage transmission lines, and conducting employee training and summer readiness drills. Although we expect to have no problem delivering the additional power our customers will need to stay cool, we are keeping a close eye on the weather and will have the personnel on hand to respond to any outages.

To report power outages or downed wires, call PSE&G's Customer Service line at 1-800-436-PSEG (7734). You can also report outages online by logging in to *My Account* at pseg.com. To report power outages via text message, and receive outage updates by text and email, sign up for [MyAlerts](#). Our mobile-friendly website includes an "[Outage Map](#)" that is updated every 15 minutes and displays the location and status of power outages in PSE&G's service area.

If experiencing difficulties with central air conditioning units or other appliances, PSE&G customers can schedule a WorryFree** repair service appointment online by logging in to *My Account*, or calling 1-800-436-PSEG.

Here are some easy and inexpensive ways you can save energy and money:

- **Seal holes and cracks around doors and windows** with insulation or weather-stripping.
- **Don't cool an empty house.** Set your thermostat higher when you are away.
- **Don't cool unused rooms.** Close the vents and shut the door.
- **Ceiling fans cool fast and cost less** than air conditioning.
- **Operate appliances in the morning or evening** when it is cooler outside.
- **When washing dishes or clothes, run full loads.**
- **Wash laundry in cold water.**
- **Close blinds and draperies facing the sun** to keep out the sun's heat.
- **Replace air filters monthly.** Dirty filters make your air conditioner work harder.
- **Use a microwave or crockpot instead of the oven.** They won't heat the house.
